Your colleagues.

Gitcoin DAO. A contributor started from their own pay address and found **15 colleagues' exact salaries.**

The DAO dropped individual pay disclosure over **"contributor privacy concerns."**

Contributor Compensation Audit

DAO Governance and Vision contributors

safder

Feb 2023

Context

Gitcoin DAO's Stewards have been pushing for increased transparency and accountability on spending for several seasons now, and with increasing urgency as markets continue to trend bearish. As approximately 95% of the DAO's spending comes from contributor compensation, the goal for this audit is to provide transparency on the DAO's compensation rates, and how they compare to the market.

Gitcoin DAO remains committed to responsible spending of its treasury funds, and the DAO Ops team has conducted research and developed frameworks and best practices to ensure fairness in compensation. You can find the DAO compensation research we completed during the summer [here](#) 14 .

As the next best thing to fully transparent compensation - which has been met with resistance due to contributor privacy concerns - we've completed an objective, facts-based audit of DAO-wide compensation.

grantees traced, judged by name

two public pay fights

MakerDAO \$205k average, published

\$132k average, published

So companies walk away.

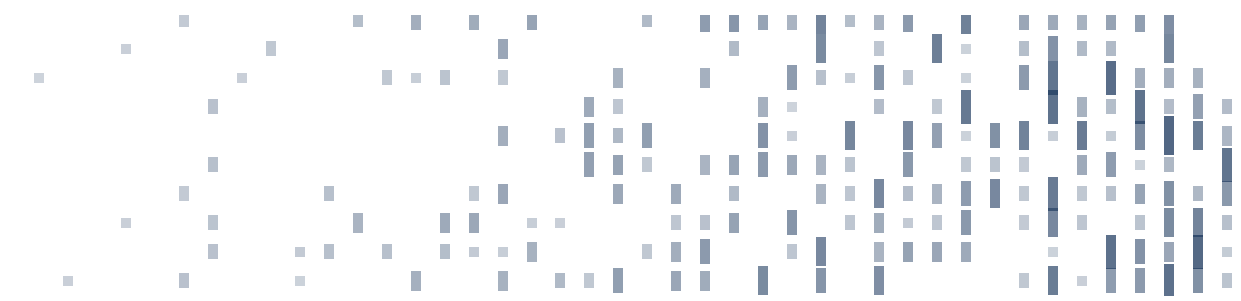

usa.visa.com · Mar 25 2026 · press release

“Many banks see the lack of privacy as a dealbreaker for moving meaningful activity onchain,”
banks can’t run payroll if salaries are public

S "would publish every salary"	Circle "payroll should not be market data"	J.P. Morgan "transparent by design"	Fireblocks "employees don't want their wages exposed"
---------------------------------------	---	--	--

So they built private payrolls.

Toku: The company that made private stablecoin payroll a reality | Built on Aleo

Built On Aleo Stablecoins JULY 29, 2026 | 7 MIN READ

Toku on Aleo

Private payroll on a separate chain with its own stablecoin. Enterprise clients only.

aleo.org/post/toku-case-study

How Deel built its stablecoin wallet for global contractors on Tempo

Date Jun 2, 2026 Time 5 min Author Tempo Partnerships

Deel built a dollar-backed stablecoin wallet for contractors across 80+ countries in LATAM, Africa, the Middle East, and APAC, embedded inside the platform 40,000+ businesses already use to hire and pay global workers. Tempo is the exclusive chain partner for the wallet stack, the DLUSD stablecoin behind it, and the Morpho-powered earn product on top. [Read more](#)

Tempo Zones, used by Deel

Private zones for payroll and treasury. Design partners only. "Auditable access for Deel."

Early Access

Documentation ↗

Base Ledgers, by Coinbase

A private ledger that settles on Base. Request a demo, early access. An operator runs it.

base.org/ledgers · docs.base.org/ledger/overview

1

Not for everyone.

Enterprise clients, design partners, early access by application.

2

Not fully private.

An account in their ledger, or their chain. The operator sees everything.

Everyone else still pays in public.

Soapay

is

Privacy infrastructure for payments on chain

where

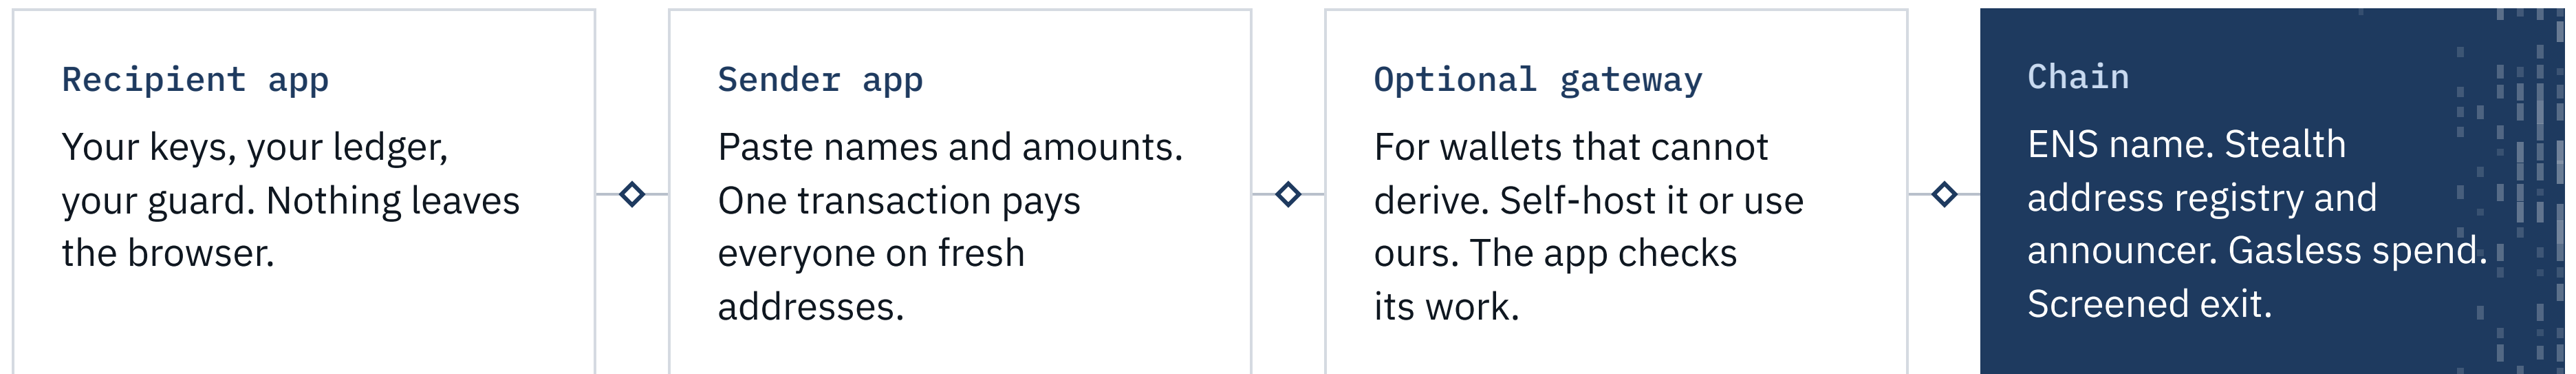

**Every payment lands on a fresh
address that only you can open**

and

You can spend it without a trace

Three apps on open standards. Nothing of ours holds money.

▣ Every contract we touch is a public standard someone else already audited.

▣ The only thing you ever share is a name.

▣ Everything rebuilds from your seed with every server off.

Use cases

Built for payroll. Ready for any payout.

01

Dividends and revenue share

02

Token and equity allocations

03

Vendor and supplier payments

04

Grants and bounties

05

Prizes and airdrops

06

Tips, donations, creators

Future plan

What we add next.

1

Shielded amounts

Hide the number, not just the name.

2

Any wallet

The guard and pay-by-name as an SDK wallets embed.

3

Agents paying agents

Pay by name with ERC-8004 identity.
No public revenue feed.
