The chain published it anyway.

Gitcoin, 2022.

Contributors refused
to publish pay.

A colleague traced
15 exact salaries anyway.

Nothing has changed since.

Contributor Compensation Audit

DAO Governance and Vision contributors

safder

Feb 2023

Context

Gitcoin DAO's Stewards have been pushing for increased transparency and accountability on spending for several seasons now, and with increasing urgency as markets continue to trend bearish. As approximately 95% of the DAO's spending comes from contributor compensation, the goal for this audit is to provide transparency on the DAO's compensation rates, and how they compare to the market.

Gitcoin DAO remains committed to responsible spending of its treasury funds, and the DAO Ops team has conducted research and developed frameworks and best practices to ensure fairness in compensation. You can find the DAO compensation research we completed during the summer [here](#) 14 .

As the next best thing to fully transparent compensation - which has been met with resistance due to contributor privacy concerns - we've completed an objective, facts-based audit of DAO-wide compensation.

Dealbreaker for companies.

usa.visa.com · Mar 25 2026 · press release

“Many banks see the lack of privacy as a dealbreaker for moving meaningful activity onchain,”
banks can’t run payroll if salaries are public

and the rest agree

stripe tempo.xyz · Apr 16 2026

CIRCLE arc.io · Jun 10 2026

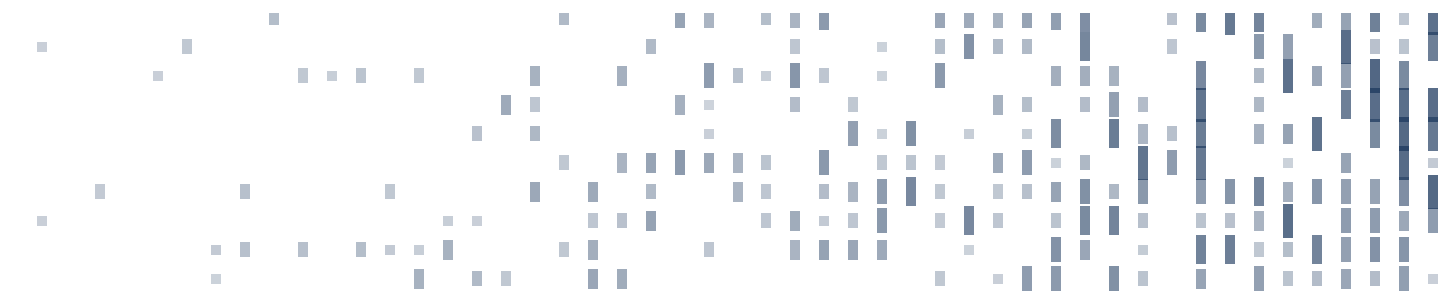

Fireblocks fireblocks.com · Apr 20 2026

But today’s stablecoin networks still broadcast everything publicly by default. A company running payroll would publish every salary. A payment processor settling with merchants

A company’s payroll should not be market data. Treasury movements should not reveal

want cash-like privacy. Payroll is a really good example here, considering most employees don’t want their wages exposed.

Existing solutions today.

Time 5 min

Author Tempo

Partnerships

Deel built a dollar-backed stablecoin wallet for contractors across 80+ countries in LATAM, Africa, the Middle East, and APAC, embedded inside the platform 40,000+ businesses already use to hire and pay global workers. Tempo is the exclusive chain partner for the wallet stack, the DLUSD stablecoin behind it, and the Morpho-powered earn product on top. [Read more →](#)

Deel powers payroll for more than 40,000 businesses across 150 countries, but for contractors in much of the world, getting paid in dollars has not meant being able to hold dollars. A worker in Buenos Aires would receive USD on the Deel side, then watch it convert

Tempo Zones, used by Deel

Private Payments

Private transactions for your business.

Base Ledgers combine instant onchain settlement with the confidentiality and built-in compliance your business requires.

Base Ledgers, by Coinbase

- 1

Permissioned.
- 2

Not fully private.

Everyone else still pays in public.

Soapay

is

Privacy infrastructure for payments on chain

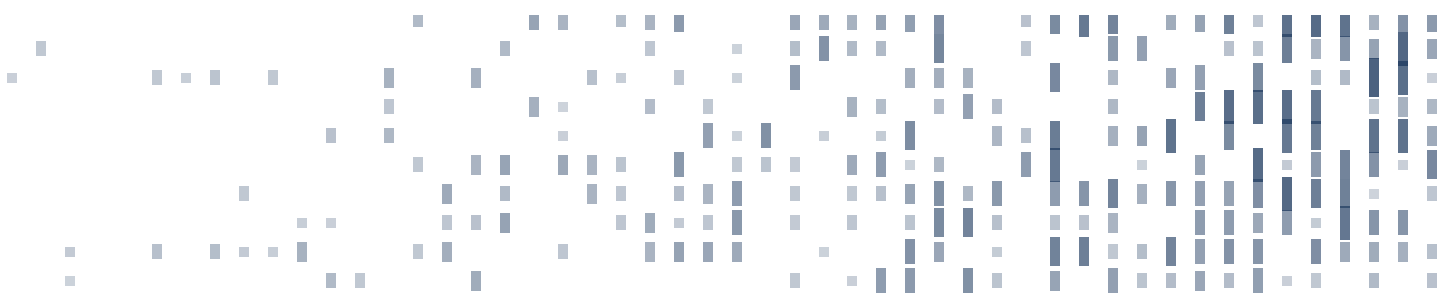

where

**Every payment lands on a fresh
address that only you can open**

and

**You can spend it without
it ever linking back to you**

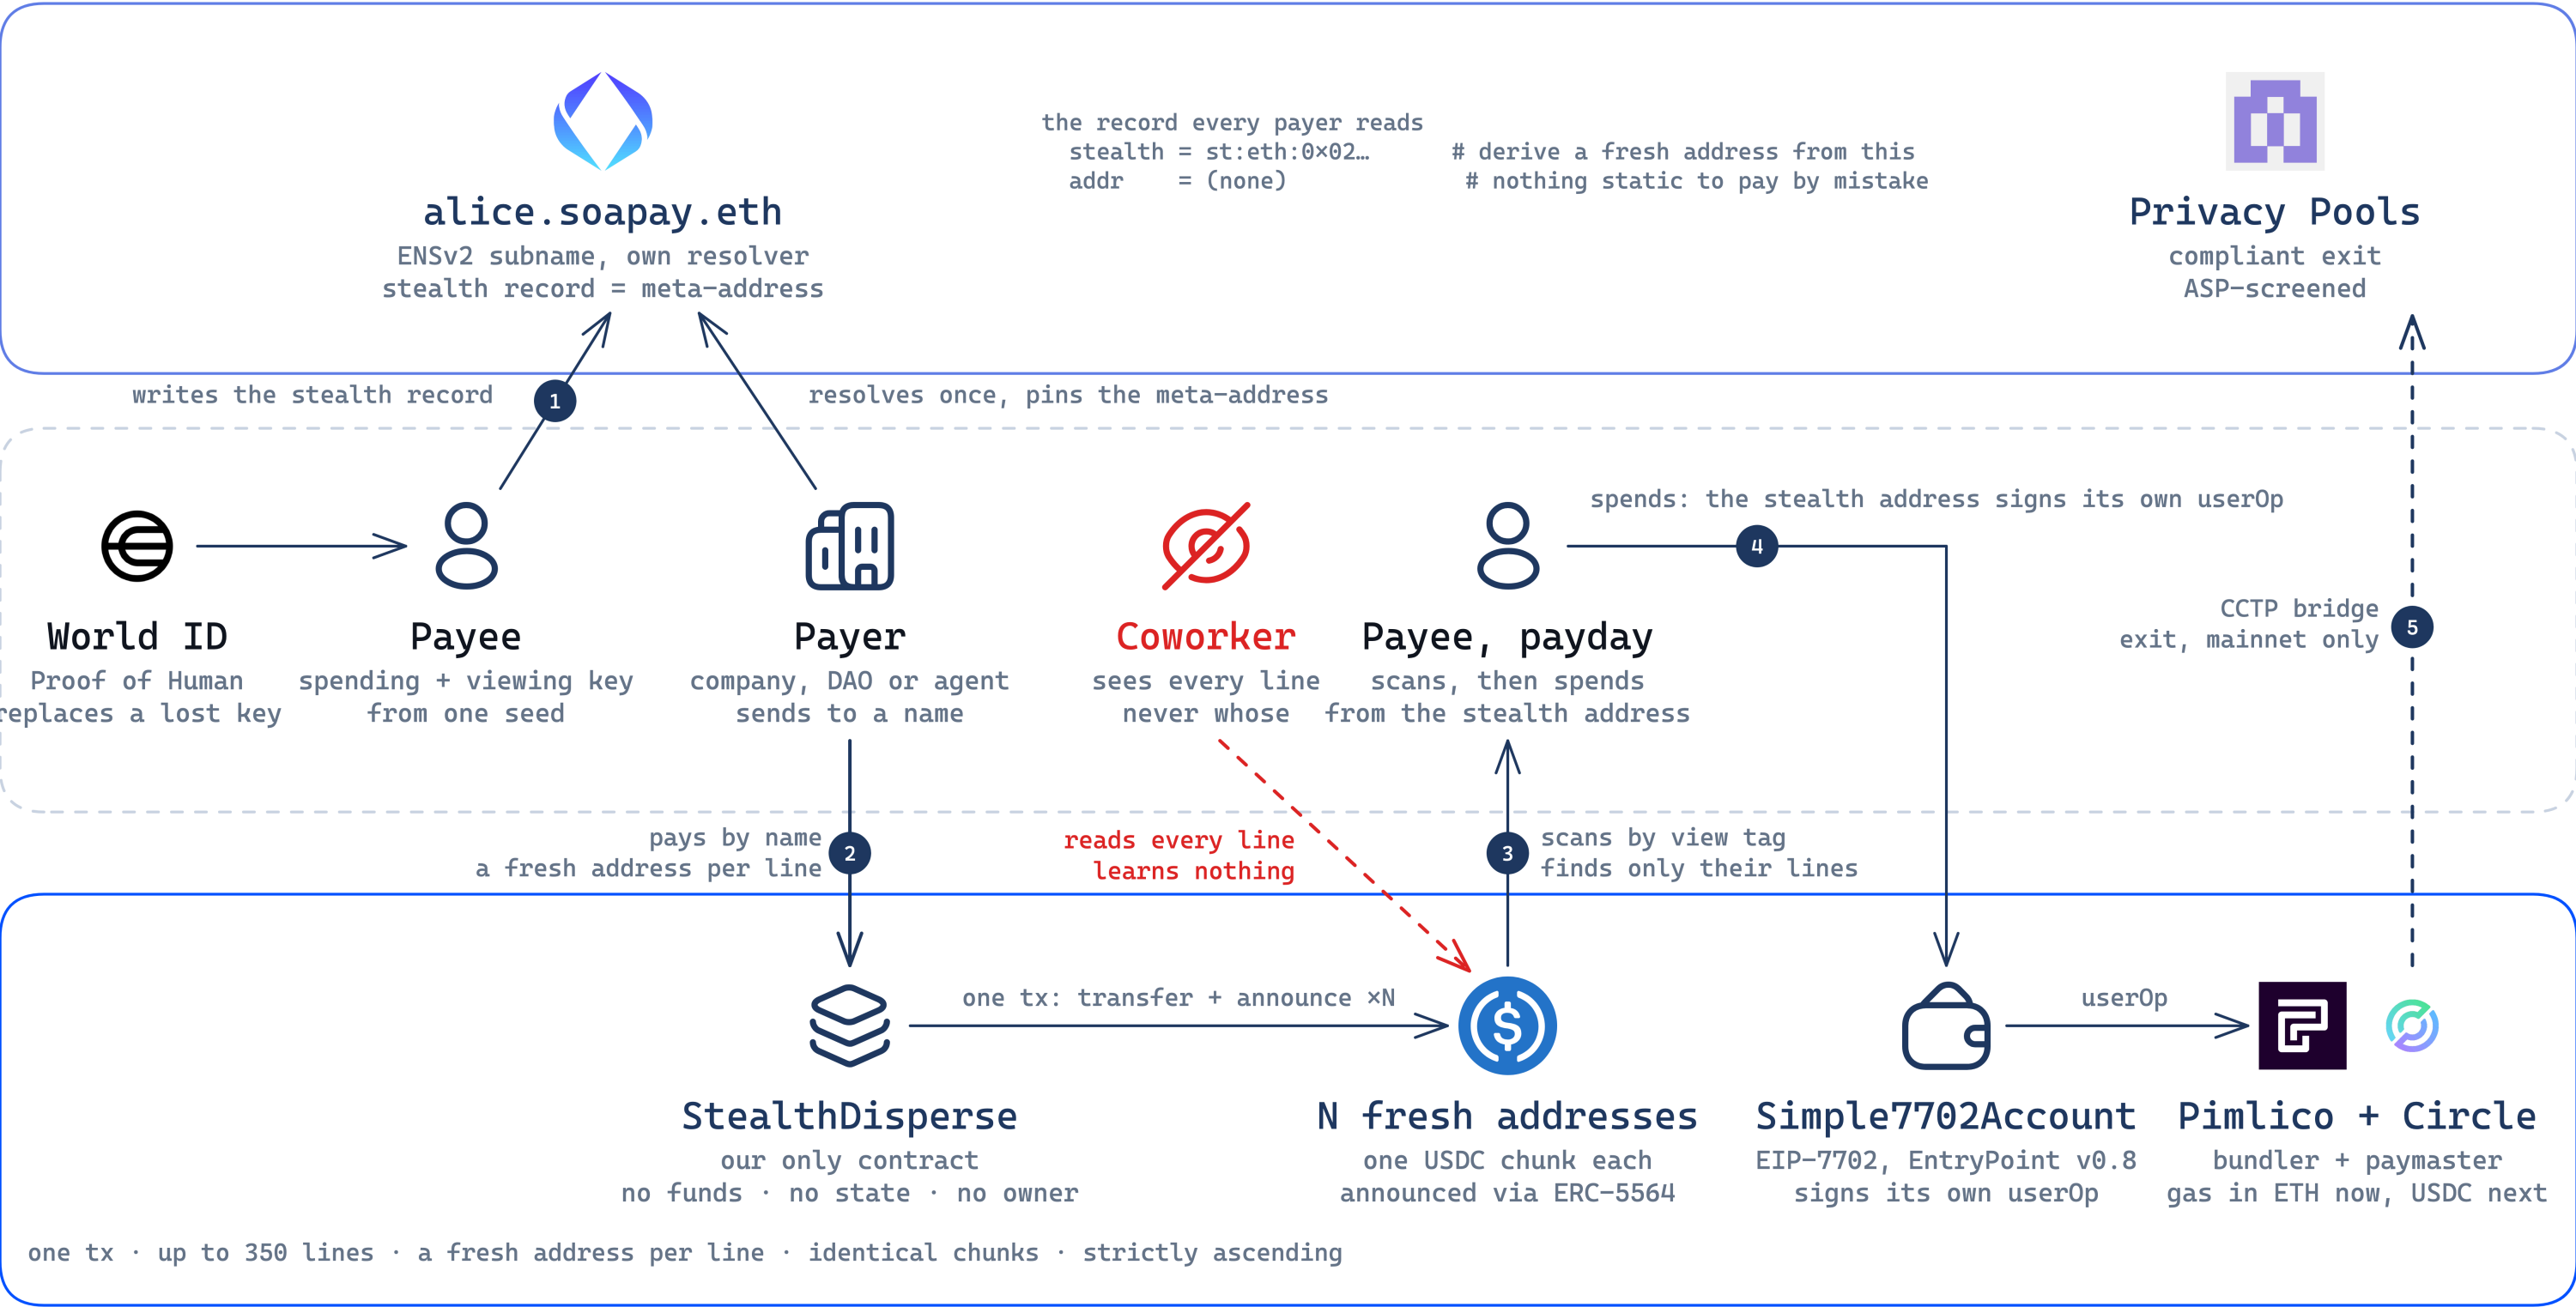

Architecture diagram.

 **Ethereum Sepolia**
names · the exit

 **People and keys**
off chain, keys stay with the payee

 **Base Sepolia**
payments, scanning and spending

Partner tracks.

Names. ENSV2 · SEPOLIA

- Every payee gets a subname under soapay.eth
- Only the employee's key can update it
- Pay is sent to the name, never to an address

Recovery. WORLD ID · IDKIT · PROOF OF HUMAN

- A lost key can only be replaced by the same human
- The employee re-proves Proof of Human in the World App
- No match, no redirect of future pay

Dashboard. DIGITAL ASSET DASHBOARD TRACK

- The employee app is the digital asset dashboard
- Live balances and pay history across every fresh address
- A guard that blocks any spend that would link them

Built for payroll. Ready for any payout.
